\* Applicable only when equipped with double tires in front. With single tires, capacities are the same as those shown for full 360°.

\*\* Applicable when traveling at a speed lower than 5km/h.

\* All rated capacities are based on the machine being on a firm, level, uniformly supporting surface.

\* The weight of the lifting devices must be considered to be a part of the load.

\* The weight of loads carried on the deck should also be considered to be a part of the load.

\* The capacities shown in the area separated by thick borderlines are based on mechanical and structural strength.
