

Technical Data Hydraulic lift crane

LR 1250

Litronic®
Complies with ANSI B 30.5

Basic machine with undercarriage

Fig. 1: Dimensions in _____ ft

A Overall length of superstructure with lowered A-frame and boom foot	57' 5"
A ₁ Centre of rotation - front edge of cabin	10' 10"
A ₂ Tail swing - lowered A-frame	28' 1"
A ₃ Max. tail swing - A-frame in working position	25' 5"
A ₄ Length of superstructure	31' 2"
A ₅ Centre rotation - rear counterweight	20' 4"

H Height over counterweight	14' 1"
H ₁ Height over lowered A-frame	12' 7"
H ₂ Ground clearance of superstructure	5' 3"
H ₃ Ground clearance of boom foot pivot	7' 5"
H ₄ Ground clearance of horizontal boom foot	3' 10"

L Centre of rotation - boom foot pivot	5' 7"
L ₁ Centre of rotation - centre of tumbler	12' 8"
L ₂ Wheel base (centre idler to centre tumbler)	25' 11"
L ₃ Distance from edge of horizontal boom foot to crawler	14' 1"
L ₄ Length of crawlers	29' 8"
L ₅ Distance between rear end of crawler and outside of counterweight	5' 4"

Fig. 2: Dimensions in _____ ft

B Width of counterweight	18' 0"
B ₁ Centre of rotation - outside of superstructure	5' 9"
B ₂ Centre of rotation - outside of cabin in working position	8' 2"
B ₃ Width of superstructure	11' 6"
C Height of crawlers	4' 10"
C ₁ Ground clearance of undercarriage	20"
S Width of track shoes	48"
W Track width of undercarriage	20' 8"
W ₁ Width of undercarriage	24' 7"

Operating Weight and Ground Pressure

The operating weight includes the basic machine with crawler tracks, 2 main winches 33,100 lbs single working line pull each and 76 ft main boom, consisting of A-frame, boom foot (23 ft), boom head (23 ft), boom extension (10 ft), boom extension (20 ft) 166,000 lbs basic counterweight and 59,500 lbs carbody counterweight and 232 US t hook block.

with 48" flat track shoes 435,500 lbs - 14,93 lbs/sq.in.

LIEBHERR

The Better Machine.

Weight in lbs * 10 ft main and 10 ft jib	3,500		

Transport dimensions and weights

Unloading of basic machine and swinging out of cabin

Unloading and assembly of crawlers

Unloading and assembly of counterweight

Unloading and assembly of boom – Assembly of boom foot

Assembly of boom and reeving of hoist and jib ropes

Self assembly system

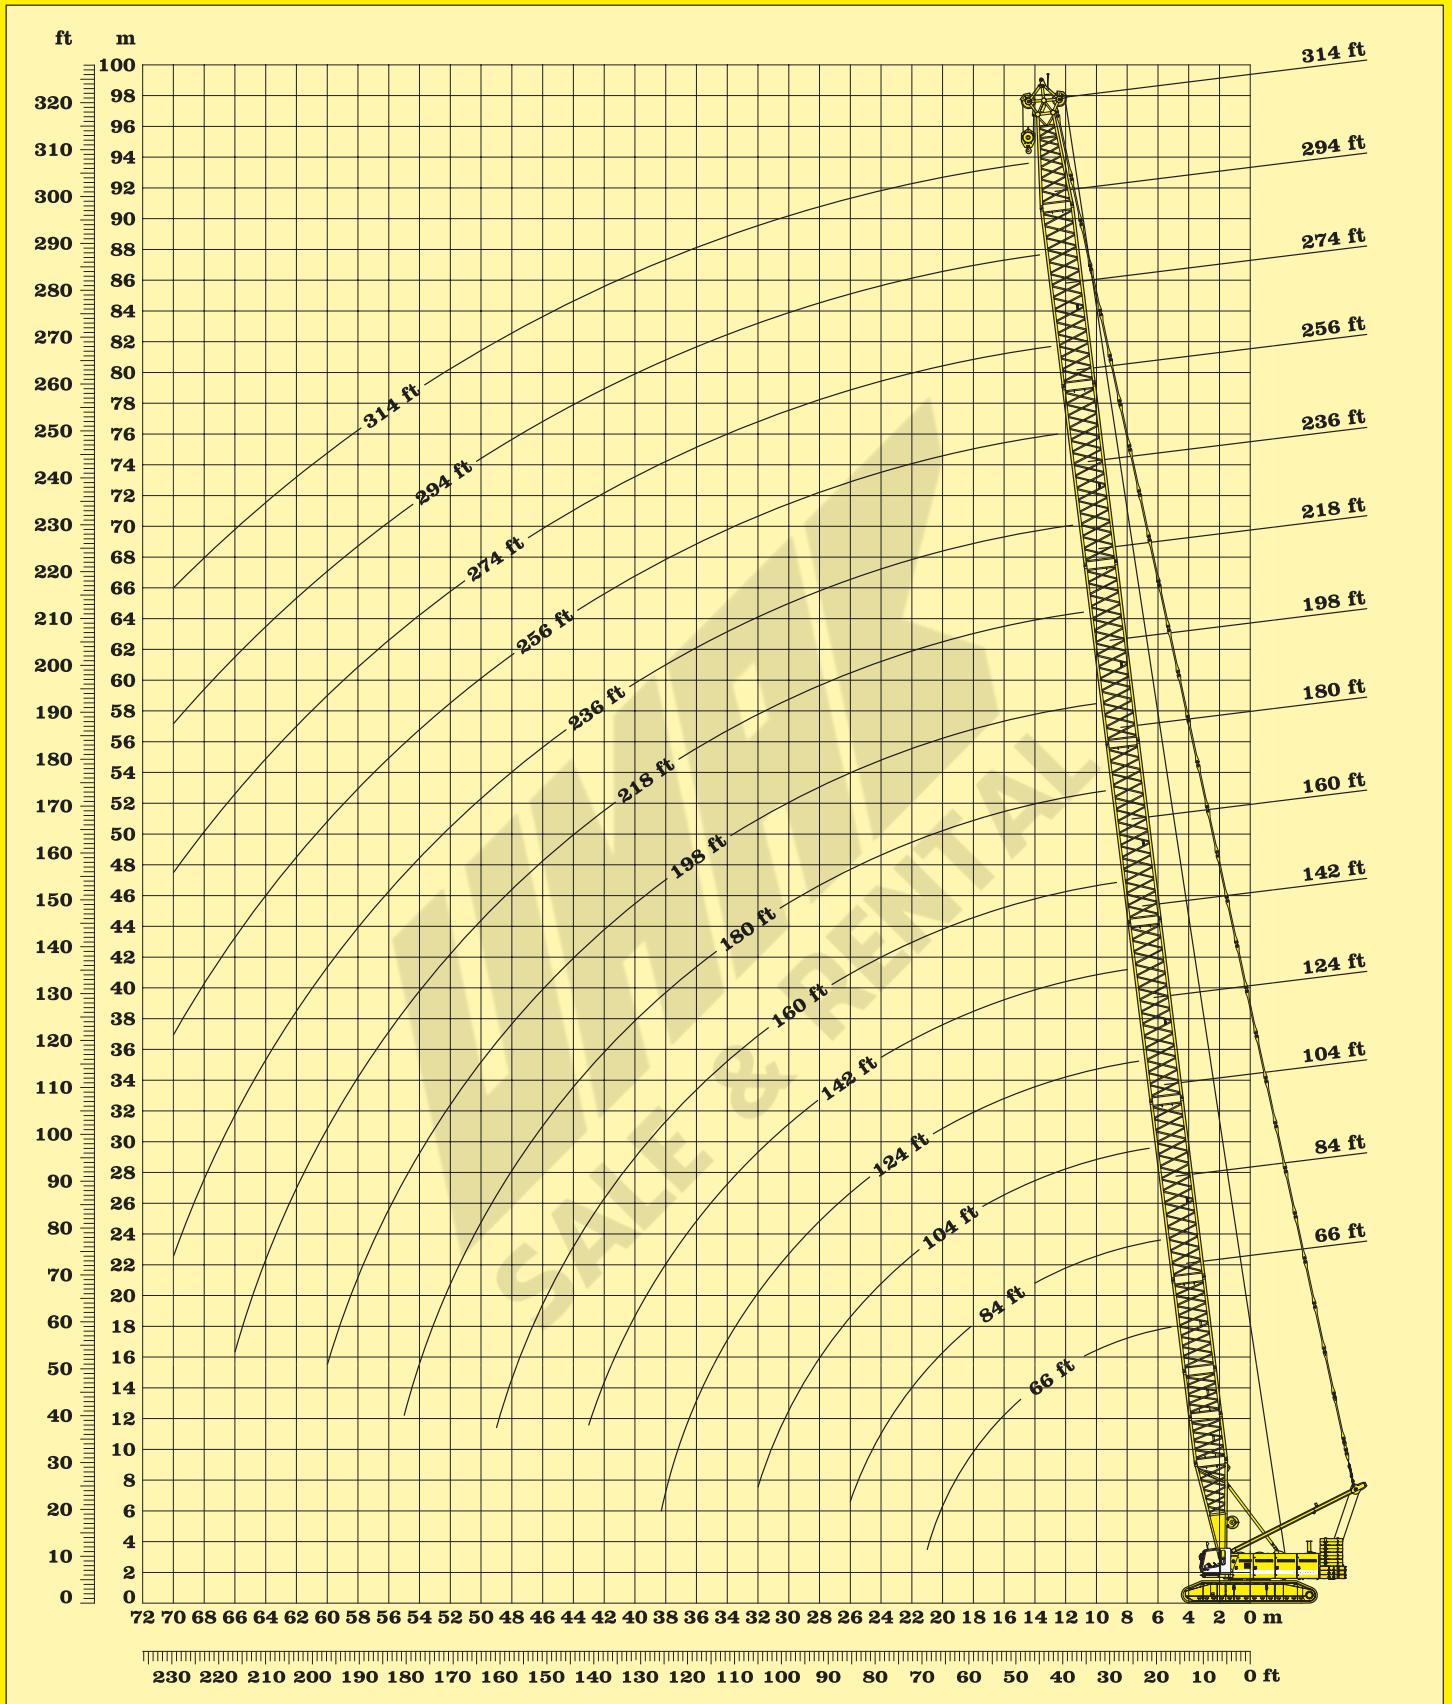

Luffing of boom

Luffing of jib

Working position

Booming up - crane in working position

Working range - main boom

Scope of delivery:

Basic machine LR 1250 consisting of:

- Superstructure
- Main winches 2x 33,100 lbs without free fall
- Main boom luffing winch 1x 33,100 lbs including ropes
- Basic counterweight 166,000 lbs
- Hydraulic tilting cabin 20°
- Electronic load moment limiter LMB
- Hoisting limit switch
- Electric refuelling pump
- A-frame 1
- Undercarriage
- Flat track shoes 48" wide
- Carbody counterweight 2x 29,750 lbs
- Standard tool set
- Self erection system
- Main boom HPT, including pendants, corresponding length
- Ropes for main winches
- Corresponding hook block

Option:

- Back-up control system
- Air conditioning
- Auxiliary jib
- GSM-modem

Remarks:

1. The lifting capacities stated are valid for lifting operation only (corresponds with crane classification according to F.E.M.1001, crane group A1)
2. Crane standing on firm, level ground.
3. The weight of the lifting device (hoisting ropes, hook block, shackle etc.) must be deducted from the gross lifting capacity to obtain a net lifting value.
4. Additional equipment on boom (e.g. boom walkways, auxiliary jib) must be deducted to get the net lifting capacity.
5. The lifting capacities stated do not exceed 75% of the tipping load.
6. For max. wind speed please refer to lift chart in operator's cab or manual.
7. The slewing speed of the load may not exceed 90 m/min.
8. Working radii are measured from centre of swing and under load.
9. The lifting capacities are valid for 360 degrees of swing.
10. Calculation of stability under load is based on DIN 15019 / part 2 / chart 1.
11. The structures are calculated according to DIN 15018 / part 3.

Auxiliary jib 33 US t

The lifting capacity of the auxiliary jib is equal to that of the main boom (HPT) at the same working radius, but must not exceed the maximum lifting capacity of 33 US t.

Transport dimensions and weights Auxiliary jib

Width	50"
L Length	10' 10"
H Heigh	5' 3"

Reeving chart depending on maximum load:

Reeving	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

Scope of delivery and assembly of main boom

Scope of delivery:

Basic machine LR 1250 consisting of:

- Superstructure
- Main winches 2x 33,100 lbs without free fall
- Main boom luffing winch 1x 33,100 lbs with ropes
- Basic counterweight 166,000lbs
- Hydraulic tilting cabin 20°
- Electronic load moment limiter LMB
- Hoisting limit switch
- Electric refuelling pump
- A-frame 1
- Undercarriage
- Flat pads 48 inch wide
- Carbody counterweight 2x 29,750 lbs
- Standard tool set
- Self assembly system
- Main boom (HPT) including pendants, corresponding length
- Ropes for main winches
- Corresponding hook block
- Jib (NDL) including pendants, corresponding length
- Jib luffing winch 1x 23,200 lbs with ropes

Option:

- Back-up control system
- Air conditioning
- Auxiliary jib
- GSM-modem

Remarks:

1. The lifting capacities stated are valid for lifting operation only (corresponds with crane classification according to F.E.M. 1.001, crane group A1)
2. Crane standing on firm, horizontal ground.
3. The weight of the lifting device (hoisting ropes, hook block, shackle etc.) must be deducted from the gross lifting capacity to obtain a net lifting value.
4. Additional equipment on boom (e.g. boom walkways, auxiliary jib) must be deducted to get the net lifting capacity.
5. The lifting capacities stated do not exceed 75% of the tipping load.
6. For max. wind speed please refer to lift chart in operator's cab or manual.
7. The slewing speed of the load may not exceed 90 m/min.
8. Working radii are measured from centre of swing and under load.
9. The lifting capacities are valid for 360 degrees of swing.
10. Calculation of stability under load is based on DIN 15019 / part 2 / chart 1.
11. The structures are calculated according to DIN 15018 / part 3.

Main boom configuration (HPT) for lengths between 23 m and 63.8 m:																
Boom	Length	Amount of boom extensions														
Foot	7.0 m	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
Extension	3.0 m	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1
Extension	6.0 m	1	0	0	1	1	0	0	1	1	0	0	1	1	0	0
Extension	11.7 m	0	1	1	1	1	2	2	2	2	3	3	3	3	4	4
Head	7.0m	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
Boom length (m)		23	25.7	28.7	31.7	34.7	37.4	40.4	43.4	46.4	49.1	52.1	55.1	58.1	60.8	63.8
Reeving		15	13	13	12	11	10	9	9	8	8	7	6	6	5	5

Jib configuration (NDL) for lengths between 20 m and 62 m:																
	Length	Amount of boom extensions														
Boom foot	5.5 m	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
Boom ext.	3.0 m	0	1	2	0	1	2	0	1	2	0	1	2	0	1	2
Boom ext.	9.0 m	1	1	1	2	2	2	3	3	3	4	4	4	5	5	5
Boom head	5.5 m	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1
Jib length (m)		20	23	26	29	32	35	38	41	44	47	50	53	56	59	62

Scope of delivery and assembly of main boom and luffing jib

Working ranges - luffing jib main boom 83°

Engine

Water cooled, V-8-cylinder Liebherr Diesel engine, turbo charged with intercooler, model D 9408 TI-E, power rating according to ISO 9249, 544 hp at 1900 rpm. The automatic load control system adapts perfectly the power output of the main users to the engine rpm. The temperature and rpm controlled cooling system saves power and reduces the noise emission. Fuel Tank: 2x 121.5 gal capacity with continuous level indicator and reserve warning at 10.6 gal.

Hydraulic System

The main pumps are operated by a distributor gearbox. Axial piston displacement pumps work in closed and open circuits supplying oil only when needed (flow control on demand). To minimize peak pressure an automatically working pressure cut off is integrated. This spares pumps and saves energy. Winch 1 and 2: Axial piston displacement pumps (swash plate design) with 85 gal/min. each. Crawlers: Axial piston displacement pumps (swash plate design) with 2x 79 gal/min. Swing gear: Axial piston displacement pump (swash plate design) with 85 gal/min. Boom hoist: Axial piston displacement pump (swash plate design) with 79 gal/min. Max. working pressure: 5075 psi. Hydraulic oil tank capacity: 248 gal. The hydraulic oil is cleaned through electronically controlled pressure and return filters. Possible contamination is signaled in the cabin. The use of synthetic environmentally friendly oils is possible.

Winches

Winch options:
 Single working line pull **33,100 lbs**
 Rope diameter (metric only): **28 mm**
 Drum diameter : **29 "**
 Rope speed ft/min **0-380**
 Rope capacity 7 layers **1870 ft**
 Propulsion through a planetary gearbox in an oil bath. Load support by the hydraulic system; additional safety factor provided by a spring loaded, multi-disc holding brake. The main winches use pressure controlled, variable flow hydraulic motors. This system features sensors that automatically adjust oil flow to provide max. winch speed depending on load.
 Option - winch with freefall system:
 Clutch and braking functions on the freefall system are provided by a compact designed, low wear and maintenance free multi-disc brake.

Equipment

- Main boom HPT, max. length **314 ft**
- Jib NDL, max. length **206 ft**
- Jib - stay ropes
- Jib - luffing winch with ropes
- Auxiliary jib 33 US t lifting capacity
- Ropes for main winches
- Hook
- Heavy lift equipment available upon request.

Swing Drive

Consists of rollerbearing with external teeth, 2 swing drives with fixed axial piston hydraulic motor, spring loaded and hydraulically released multi-disc holding brake, planetary gearbox and pinion. Free swing with hydraulic moment control reduces wear to a minimum, because rotation moment is sustained through the hydraulic system by the Diesel engine. A multi-disc holding brake acts automatically at zero swing motion. Swing speed from 0 - 1.84 rpm continuously variable.

Crawler

Propulsion through axial piston motor, hydraulically released spring loaded multi-disc brake, crawler tracks, hydraulic chain tensioning device.
 Flat track shoes **48 "**
 Drive speed **0.8 mph.**

Control

The control system - developed and manufactured by Liebherr - is designed to withstand extreme temperature and the many heavy-duty construction tasks for which this crane has been designed. Complete machine operating data are displayed on a high resolution monitor screen. To ensure clarity of the information on display, different levels of data are shown in enlarged lettering and symbols. Control and monitoring of the sensors are also handled by this high technology system. Error indications are automatically displayed on the monitor in English. The crane is equipped with proportional control for all movements, which can be carried out simultaneously. Additionally a "Redundant" or back-up control system is standard, allowing restricted operation of the machine in the event of a malfunction in the electronics or the sensors. The crane is operated with 2 multi-directional joysticks, right for winch I and boom hoist drive, left for winch II and swing. Crawler control is actuated with the two central foot pedals. Additionally, hand levers can be attached to the pedals.

- Options:
- MDE: Machine data recording
 - PDE: Process data recording
 - GSM-modem

Boom luffing winch

Drum with internally located planetary gearbox, axial piston hydraulic motor and hydraulically released spring loaded multi-disc brake. Max. line pull: 33,100 lbs. Rope diameter: 24 mm (metric only). Line speed: 0-280 ft/min.

Jib luffing winch

Drum with internally located planetary gearbox, axial piston hydraulic motor and hydraulically released spring loaded multi-disc brake. Max. line pull: 17,650 lbs. Rope diameter: 20 mm (metric only). Line speed: 0-236 ft/min.

Noise emission

Special sound proofing results in a very low noise pressure level of 78 dB (A) at 53 ft radius (ISO 4872).

LOCAL DEALER:

Load charts main boom**Load charts**

The LR1250 meets ANSI B30.5 requirements. (including SAE J987, SAE J 765)

The crane classification acc. ISO 4301/1 and /2 given by the manufacturer is A1 (Q1, U2). Please see also operating manual chapter 2.2.2 where the state of loading (Q1) and the class of utilization (U2) is explained.

All radii which are allowed show a rated capacity, other length and radii are not approved.

Load ratings are based on the freely suspended load.

All loads shown do not exceed 75% of the tipping load. Grey shaded areas show, where structure is the limiting factor.

The charts are only valid for off level ground conditions of up to 1%.

Hooks, load blocks, slings, hoist lines or any other fixing device below the boom head are considered as part of the load.

The nominal line pull at the hoisting winch is 33730 lbs (150kN). These values shall not be exceeded. Please refer to the following table. The coefficient of efficiency is included:

Heavy boom head:	7.0m [23ft]	8 sheaves (maximum parts of line: 16)
------------------	-------------	---------------------------------------

Parts of line	1	2	3	4	5	6	7	8	9	10
Capacity [lbs]	32628	64595	96342	127427	158071	188275	218037	247359	276239	304679
Capacity [t]	14.8	29.3	43.7	57.8	71.7	85.4	98.9	112.2	125.3	138.2

Parts of line	11	12	13	14	15	16
Capacity [lbs]	332678	360235	387352	414028	440484	456500
Capacity [t]	150.9	163.4	175.7	187.8	199.8	207.1

Please refer also to reeving instructions in chapter 8 of the manual.

Load chart is calculated for original crane and boom sections in new and perfect conditions as approved by LIEBHERR. Any damages, non factory approved alterations or additions will reduce or prohibit it's use.

The load has to be reduced if the pendant straps of the luffing jib remain on the main boom. For each insert, where the pendants remain on the boom the capacity has to be reduced according the following table:

Insert 8.9ft (3.0m)	Insert 19.7ft (6.0m)	Insert 38.4ft (11.7m)
110 lbs (50kg)	187 lbs (85kg)	375 lbs (170kg)

All pendant straps of the luffing jib have to be removed for the boom length from 78.5m [258'] to 96.2m [316']. Removing all luffing jib pendants for all boom-length is always recommended.

The crane operator shall be qualified like given information in chapter 2.2.4 of the operating manual. The operator and assistant personnel associated with the crane shall read and fully understand the latest applicable ANSI code for mobile crane (ANSI B30.5).

Dynamic effects due to hoisting and lowering of the load, booming, swinging, travel and wind must be considered by the crane operator. The operator shall therefore reduce load ratings in order to take these conditions into account.

Load charts main boom

Rated lifting capacities do not account for effects of wind on a suspended load or boom.

Judgment and experience of the crane operator, job planners and supervisors must be used to compensate for affect of wind on the lifted load and boom by reducing ratings, reducing speeds or a combination of both. Local conditions have to considered additionally (e.g. wind effects between and around buildings).

As a guideline the following table show rating reductions [%] which shall be used as a minimum. For changing wind speeds an especially for gusts of wind the maximum wind speed must be used. For wind speeds between given values the maximum wind speed shall be taken. The following table is valid only for the LR1250 and the attached chart.

Main boom length [ft]		66 - 123	142 - 199	219 - 258	276 - 316
Main boom length [m]		20.0 - 37.4	43.4 - 60.8	66.8 - 78.5	84.2 - 96.2
Wind speed [MPH]	Wind speed [m/s]	Percent rating reduction [%]			
15	7	0	0	0	0
20	9	20	20	20	20
25	11	20	20	20	20
30	13	30	30	30	30
35	16	30	30	30	30
Above 35	Above 16	Operation not permitted			

Additional reduction shall be done for light loads with a large sail area of the load. (larger than 1m²/1000kg load or 0.7 square inch per 1lbs load)

Parking positions of the boom are given in chapter 2.2.9 of the manual.

If a wind speed of more than 44MPH (20m/s) is expected or forecast in the wheater forecast, the complete boom shall be lowered horizontally to the ground early enough. (see chapter 2.2.6 manual)

The crane is authorized for use in outdoor temperatures of between -20°C and +40°C.

Travel:

There is no restriction of the position of the superstructure in relation to the crawlers.

Capacity charts are based on static conditions. Travelling allways creates dynamic effects on the crane.

Therefore deratings are required. For a rule of thumb to travel with speeds up to 0.9mph (0.4m/s) on even surface with no more than 1% offlevel the following derating should be applied.:

90% of Rated capacity but no less than 2200lbs. (1000kg)

In case special deratings are required, calculation should be made based on 100% of the load chart.

Using the runner (rooster sheave), the capacities at the main boom hook have to be reduced acc. given table:

	Reduction of Capacity [lbs]	Reduction of Capacity [kg]
Runner without rope	-2425	-1100
Runner with single hook block [1985lbs / 900kg]	-4410	-2000
Runner with hook block, single sheave [5510lbs / 2500kg]	-8820	-4000

Increase of the radius, using the runner:

Main boom angle [°]	offset [ft]	offset [m]
83	6.9	2.1
45	8.2	2.5
15	6.9	2.1

Load charts main boom + fixed jib**Load charts**

The LR1250 meets ANSI B30.5 requirements. (including SAE J987, SAE J 765)

The crane classification acc. ISO 4301/1 and /2 given by the manufacturer is A1 (Q1, U2). Please see also operating manual chapter 2.2.2 where the state of loading (Q1) and the class of utilization (U2) is explained.

All radii which are allowed show a rated capacity, other length and radii are not approved.

Load ratings are based on the freely suspended load.

All loads shown do not exceed 75% of the tipping load. Grey shaded areas show, where structure is the limiting factor.

The charts are only valid for off level ground conditions of up to 1%.

Hooks, load blocks, slings, hoist lines or any other fixing device below the boom head are considered as part of the load.

The nominal line pull at the hoisting winch is 33730 lbs (150kN). These values shall not be exceeded. Please refer to the following table. The coefficient of efficiency is included:

Boom head 1008-1	1008.20	5.5m [18ft]	2 rope pulleys (maximum parts of line: 3)
------------------	---------	-------------	-------------------------------------------

Parts of line	1	2	3
Capacity [lbs]	32628	64595	69000
Capacity [t]	14.8	29.3	31.3

Please refer also to reeving instructions in chapter 8 of the manual.

Load chart is calculated for original crane and boom sections in new and perfect conditions as approved by LIEBHERR. Any damages, non factory approved alterations or additions will reduce or prohibit it's use.

Load charts main boom + fixed jib

The load has to be reduced if the pendant straps of the luffing jib remain on the main boom.
For each insert, where the pendants remain on the boom the capacity has to be reduced according to the following table:

Insert 8.9ft (3.0m)	Insert 19.7ft (6.0m)	Insert 38.4ft (11.7m)
110 lbs (50kg)	187 lbs (85kg)	375 lbs (170kg)

All pendant straps of the luffing jib have to be removed for the boom length from 69.8m [229'] Removing all luffing jib pendants for all boom-length is always recommended.

The crane operator shall be qualified like given information in chapter 2.2.4 of the operating manual. The operator and assistant personnel associated with the crane shall read and fully understand the latest applicable ANSI code for mobile crane (ANSI B30.5). Dynamic effects due to hoisting and lowering of the load, booming, swinging, travel and wind must be considered by the crane operator. The operator shall therefore reduce load ratings in order to take these conditions into account.

Rated lifting capacities do not account for effects of wind on a suspended load or boom. Judgment and experience of the crane operator, job planners and supervisors must be used to compensate for affect of wind on the lifted load and boom by reducing ratings, reducing speeds or a combination of both. Local conditions have to be considered additionally (e.g. wind effects between and around buildings). As a guideline the following table show rating reductions [%] which shall be used as a minimum. For changing wind speeds an especially for gusts of wind the maximum wind speed must be used. For wind speeds between given values the maximum wind speed shall be taken. The following table is valid only for the LR1250 and the attached chart.

		All combinations
Wind speed [MPH]	Wind speed [m/s]	Percent rating reduction [%]
15	7	0
20	9	10
25	11	10
30	13	10
35	16	20
Above 35	Above 16	Operation not permitted

Additional reduction shall be done for light loads with a large sail area of the load. (larger than 1m²/1000kg load or 0.7 square inch per 1lbs load)
Parking positions of the boom are given in chapter 2.2.9 of the manual.
If a wind speed of more than 44.7MPH (20m/s) is expected or forecast in the wheetar forecast, the complete boom shall be lowered horizontally to the ground early enough. (see chapter 2.2.6 manual)

The crane is authorized for use in outdoor temperatures of between -20°C and +40°C.

Travel:

There is no restriction of the position of the superstructure in relation to the crawlers. Capacity charts are based on static conditions. Travelling allways creates dynamic effects on the crane. Therefore deratings are required. For a rule of thumb to travel with speeds up to 0.9mph (0.4m/s) on even surface with no more than 1% offlevel the following derating should be applied.:

90% of Rated capacity but no less than 2200lbs. (1000kg)

In case special deratings are required, calculation should be made based on 100% of the load chart.

Load charts main boom + luffing jib**Load charts**

The LR1250 meets ANSI B30.5 requirements. (including SAE J987, SAE J 765)

The crane classification according ISO 4301/1 and /2 given by the manufacturer is A1 (Q1, U2). Please see also operating manual chapter 2.2.2 where the state of loading (Q1) and the class of utilization (U2) is explained.

All radii which are allowed show a rated capacity, other length and radii are not approved.

Load ratings are based on the freely suspended load.

All loads shown do not exceed 75% of the tipping load. Grey shaded areas show, where structure is the limiting factor.

The charts are only valid for off level ground conditions of up to 1%.

Hooks, load blocks, slings, hoist lines or any other fixing device below the boom head are considered as part of the load.

The nominal line pull at the hoisting winch is 33730 lbs (150.0kN). These values shall not be exceeded. Please refer to the following table. The coefficient of efficiency is included:

Luffing jib head:	5.5m [18ft]	3 sheaves (maximum parts of line: 5)
-------------------	-------------	--------------------------------------

Parts of line	1	2	3	4	5	6
Capacity [lbs]	32628	64595	96342	127427	158071	188700
Capacity [t]	14.8	29.3	43.7	57.8	71.7	85.5

Please refer also to reeving instructions in chapter 8 of the manual.

Load chart is calculated for original crane and boom sections in new and perfect conditions as approved by LIEBHERR. Any damages, non factory approved alterations or additions will reduce or prohibit it's use.

The crane operator shall be qualified like given information in chapter 2.2.4 of the operating manual. The operator and assistant personnel associated with the crane shall read and fully understand the latest applicable ANSI code for mobile crane (ANSI B30.5). Dynamic effects due to hoisting and lowering of the load, booming, swinging, travel and wind must be considered by the crane operator. The operator shall therefore reduce load ratings in order to take these conditions into account.

Load charts main boom + luffing jib

Rated lifting capacities do not account for effects of wind on a suspended load or boom. Judgment and experience of the crane operator, job planners and supervisors must be used to compensate for affect of wind on the lifted load and boom by reducing ratings, reducing speeds or a combination of both. Local conditions have to considered additionally (e.g. wind effects between and around buildings).

As a guideline the following table show rating reductions [%] which shall be used as a minimum. For changing wind speeds an especially for gusts of wind the maximum wind speed must be used. For wind speeds between given values the maximum wind speed shall be taken. The following table is valid only for the LR1250 and the attached chart.

Luffing jib length [ft]		65.6-114.8		124.7-173.9		183.7-203.4	
Boom length [ft]		75.5-132.5	142.4-209	75.5-132.5	142.4-209	75.3-132.5	142.4-209
Luffing jib length [m]		20-35		38-53		56-62	
Boom length [m]		23.0-40.4	43.4-63.8	23.0-40.4	43.4-63.8	23.0-40.4	43.4-63.8
Wind speed [MPH]	Wind speed [m/s]	Percent rating reduction [%]					
15	7	0	0	0	0	0	0
20	9	10	10	10	10	10	10
25	11	20	20	10	10	10	10
30	13	20	20	10	10	20	20
35	16	30	30	20	20	40	50
Above 35	Above 16	100 = operation not allowed					

Additional reduction shall be done for light loads with a large sail area of the load. (larger than 1m²/1000kg load or 0.7 square inch per 1lbs load)

Parking positions of the boom are given in chapter 2.2.9 of the manual.

If a wind speed of more than 44.7MPH (20m/s) is expected or forecast in the wheater forecast, the complete boom shall be lowered horizontally to the ground early enough. (see chapter 2.2.6 manual)

The crane is authorized for use in outdoor temperatures of between -20°C and +40°C.

Travel:

There is no restriction of the position of the superstructure in relation to the crawlers.

Capacity charts are based on static conditions. Travelling allways creates dynamic effects on the crane.

Therefore deratings are required. For a rule of thumb to travel with speeds up to 0.9mph (0.4m/s) on even surface with no more than 1% offlevel the following derating should be applied.:

90% of Rated capacity but no less than 2200lbs. (1000kg)

In case special deratings are required, calculation should be made based on 100% of the load chart.

Load charts main boom + luffing jib**Load charts**

The LR1250 meets ANSI B30.5 requirements. (including SAE J987, SAE J 765)

The crane classification according ISO 4301/1 and /2 given by the manufacturer is A1 (Q1, U2). Please see also operating manual chapter 2.2.2 where the state of loading (Q1) and the class of utilization (U2) is explained.

All radii which are allowed show a rated capacity, other length and radii are not approved.

Load ratings are based on the freely suspended load.

All loads shown do not exceed 75% of the tipping load. Grey shaded areas show, where structure is the limiting factor.

The charts are only valid for off level ground conditions of up to 1%.

Hooks, load blocks, slings, hoist lines or any other fixing device below the boom head are considered as part of the load.

The nominal line pull at the hoisting winch is 33730 lbs (150.0kN). These values shall not be exceeded. Please refer to the following table. The coefficient of efficiency is included:

Luffing jib head:	5.5m [18ft]	3 sheaves (maximum parts of line: 5)
-------------------	-------------	--------------------------------------

Parts of line	1	2	3	4	5	6
Capacity [lbs]	32628	64595	96342	127427	158071	188700
Capacity [t]	14.8	29.3	43.7	57.8	71.7	85.5

Please refer also to reeving instructions in chapter 8 of the manual.

Load chart is calculated for original crane and boom sections in new and perfect conditions as approved by LIEBHERR. Any damages, non factory approved alterations or additions will reduce or prohibit it's use.

The crane operator shall be qualified like given information in chapter 2.2.4 of the operating manual. The operator and assistant personnel associated with the crane shall read and fully understand the latest applicable ANSI code for mobile crane (ANSI B30.5). Dynamic effects due to hoisting and lowering of the load, booming, swinging, travel and wind must be considered by the crane operator. The operator shall therefore reduce load ratings in order to take these conditions into account.

Load charts main boom + luffing jib

Rated lifting capacities do not account for effects of wind on a suspended load or boom. Judgment and experience of the crane operator, job planners and supervisors must be used to compensate for affect of wind on the lifted load and boom by reducing ratings, reducing speeds or a combination of both. Local conditions have to considered additionally (e.g. wind effects between and around buildings).

As a guideline the following table show rating reductions [%] which shall be used as a minimum. For changing wind speeds an especially for gusts of wind the maximum wind speed must be used. For wind speeds between given values the maximum wind speed shall be taken. The following table is valid only for the LR1250 and the attached chart.

Luffing jib length [ft]		65.6-114.8		124.7-173.9		183.7-203.4	
Boom length [ft]		75.5-132.5	142.4-209	75.5-132.5	142.4-209	75.3-132.5	142.4-209
Luffing jib length [m]		20-35		38-53		56-62	
Boom length [m]		23.0-40.4	43.4-63.8	23.0-40.4	43.4-63.8	23.0-40.4	43.4-63.8
Wind speed [MPH]	Wind speed [m/s]	Percent rating reduction [%]					
15	7	0	0	0	0	0	0
20	9	10	10	10	10	10	10
25	11	20	20	10	10	10	10
30	13	20	20	10	10	20	20
35	16	30	30	20	20	40	50
Above 35	Above 16	100 = operation not allowed					

Additional reduction shall be done for light loads with a large sail area of the load. (larger than 1m²/1000kg load or 0.7 square inch per 1lbs load)

Parking positions of the boom are given in chapter 2.2.9 of the manual.

If a wind speed of more than 44.7MPH (20m/s) is expected or forecast in the wheater forecast, the complete boom shall be lowered horizontally to the ground early enough. (see chapter 2.2.6 manual)

The crane is authorized for use in outdoor temperatures of between -20°C and +40°C.

Travel:

There is no restriction of the position of the superstructure in relation to the crawlers.

Capacity charts are based on static conditions. Travelling allways creates dynamic effects on the crane.

Therefore deratings are required. For a rule of thumb to travel with speeds up to 0.9mph (0.4m/s) on even surface with no more than 1% offlevel the following derating should be applied.:

90% of Rated capacity but no less than 2200lbs. (1000kg)

In case special deratings are required, calculation should be made based on 100% of the load chart.

Liebherr crawler cranes up to 300 t capacity

LIEBHERR

Quality, durability and efficiency for many years

Excellent performance and high mobility are the distinguishing features of the hydraulically driven crawler cranes with lattice boom (LR series), manufactured in Liebherr-Werk Nenzing GmbH, Austria. These cranes are suitable for a multitude of applications ranging from pure lifting jobs to simple clamshell operation, and for some types even dragline operation. New, improved material and components, enhanced precision of the control system, optimized drive technology as well as perfect handling for transport and assembly are just a few of the characteristics which provide optimum customer benefit. Quality and efficiency are factors which have emphasized the durability and reliability of the LR series for many years.

1

Profitability

For many years the main advantages of the Liebherr crawler crane series are economical transport, quick and easy assembly and low operating costs as well as high flexibility resulting from the consistent modular design principle, which enables the efficient use of the same parts for more than one type of machine.

2

Efficiency

The high flexibility of the solid boom system allows the crane to fulfil specific requirements on site and to quickly adapt to any necessary changes. The Liebherr Litronic control system based on CAN-Bus technology offers efficient control of all functions including online load chart calculation.

3

Operating comfort and safety

The ergonomic cabin design provides the operator with an unobstructed view of the entire working area. Even the standard equipment of the Liebherr crawler crane series includes numerous innovative technical features ensuring ease of operation.

4

Reliable service

With minimal product maintenance requirements, the possibility of remote diagnoses, quick assembly on site and a reliable spare parts supply, Liebherr guarantees permanent availability of its crawler cranes. LiDAT, Liebherr's comprehensive machine park management, is a data transmission and positioning system, which optimizes service.* Modern repair and training centres as well as a comprehensive network of service stations ensure worldwide customer service.

* available in selected countries

1

Profitability

For Liebherr, profitability and customer benefit begin with the transportation of the crawler cranes. Prerequisites for problem-free transportation on all roads are the ideal weight and the compactness of single components. This means maximum savings in time and money even before the cranes go into operation on site.

Self-assembly system is the name of Liebherr's advanced design, which reduces loading and assembly work to a minimum. Time and money required for these tasks can be kept to a minimum since there is no need for the usual auxiliary crane.

Profitability is also of great importance during the operation of Liebherr's crawler cranes. The focus is on reliable and economical operation for the customer. This is guaranteed through robust and durable components, low fuel consumption and minimal product maintenance. These features are provided by robust and durable components, low fuel consumption and low maintenance requirements. This applies not only to the powerful Liebherr diesel engine, but also to all other components.

Efficient transport

Weight-optimized construction and compact design distinguish the components of Liebherr crawler cranes. Both of these basic features – low transport weight and low dimensions – enable Liebherr to guarantee quick and economical transportation to the site. All equipment can be transported on standard trucks and many crane parts are designed to fit into standard containers.

Furthermore, the transport volume is reduced by placing the luffing jib sections into the main boom sections on easy-slide pads, and thanks to their low height, counterweight pieces can be placed below the boom sections for transportation. Specially designed brackets allow storage of the pendants and pins on the boom sections.

Quick and easy self-assembly

Liebherr's self-assembly system enables quick, easy and above all safe assembly of the cranes. Self-assembly starts with the unloading of the basic machine. The Liebherr crawler crane raises itself using four hydraulic jacks (Jack-Up System) onto solid support plates allowing the low loader to simply drive away from beneath the raised uppercarriage. Subsequently the uppercarriage unloads the side frames, counterweights and boom sections using either its A-frame or boom foot, depending on the type of crawler crane. Thanks to the sophisticated design the assembly of the side frames and the carbody counterweight is much easier using the self-assembly system than using an auxiliary crane. It is possible to carry out all work concerning assembly and change of equipment without an auxiliary crane. In addition, hydraulically activated pins, quick connections and an auxiliary winch for reeving of the hoist rope both facilitate and accelerate the assembly process. All boom configurations offered by Liebherr can be erected by the cranes themselves. All exactly dimensioned rigging material provided is a prerequisite to make this process and the remaining assembly so efficient.

Economical operation

The Liebherr diesel engine has been specially designed for heavy duty applications. It is extremely reliable, durable and easy to service. The efficient cooling system allows problem-free operation even under severe environmental conditions. The electronic control and monitoring system checks all machine data. Since engine electronics and crane control are optimally matched, the diesel engine is directly interlinked with the regulation of the hydraulic system. This makes the crane more economical and easier to operate for the driver. The extensive diagnostic system recognizes and localizes possible errors at an early stage. The high-output power pack provides high travelling power and single line pull combined with high rope speeds – thus guaranteeing exceptional performance. All movements can be executed simultaneously.

The crane winches are maintenance-free. The other components of Liebherr crawler cranes are equally customer friendly, for example, the lifetime lubricated undercarriage components that significantly reduce maintenance requirements.

2 Efficiency

A high level of mobility and excellent performance determine the application possibilities of Liebherr crawler cranes, which range from simple lifting jobs to clamshell operation or, for some crawler crane types, even dragline operation. The cranes operate from a generously dimensioned footprint.

The boom system has been calculated and tested according to the latest methods and thus ideally combines outstanding lifting capacities with light construction. Furthermore, this results in extremely long self-erecting lengths – not only for main boom and luffing jib but also for many other boom/jib configurations. The precise control of the crane further enhances its performance.

- State-of-the-art electronic control system
- Higher lifting capacities than comparable competitors' machines with the same configuration if the same standards are applied
- Very flexible boom configuration
- Extensive safety systems
- Use of carry-over boom parts which can be applied for various machine types

Control system

For many years, the heart of the hydraulic crawler cranes has been the Liebherr Litronic control system, which has been developed and manufactured in-house. It includes all control and monitoring functions. The system is designed to withstand extreme environmental conditions and heavy duty construction tasks and has proved itself in these situations.

Due to the integration of the load moment limitation in the control system some additional components, which otherwise would have been necessary, are no longer required. The boom configuration can be pre-selected quickly and easily on the touchscreen in the operator's cab. The system allows every equipment configuration to be operated without changing the software. Moreover, the excellent computing power provides quick supervision of the crane's monitoring functions. For movements performed simultaneously the operator does not notice the power-output distribution and can operate the crane easily and without any restrictions. At the same time the lifting capacity is calculated and monitored during operation in case of changing boom angles.

All information necessary for the on-going operation of the machine is clearly displayed on the monitor in the operator's cab. Warning signals and irregularities, for example filter clogging, are immediately displayed as they occur. The storage of such incidents allows problems to be identified and taken care of at an early stage in order to prevent further damage.

Flexible boom system with Derrick option and narrow variable track width

Only a very flexible, efficient and expandable boom system is able to fulfil the various requirements on site. The booms of Liebherr crawler cranes are characterized by their large dimensions. Thus, excellent lifting capacities can be achieved not only during heavy lifts with the main boom but also when working with the luffing jib.

For crane fleets it is a considerable advantage if the same boom system can be used for various crane types. Liebherr crawler cranes offer the following boom configurations:

- Main boom
- High-reach boom for great heights
- Auxiliary jib
- Fixed jib
- Luffing jib
- Midfall option offering the possibility to work with a second hook over a sheave mounted in the luffing jib
- Derrick option with suspended counterweight or wheeled counterweight carriage (for LR 1280 and LR 1300)

Type	Main boom						L-boom high reach without Derrick operation						Fixed jib			Luffing jib				Windmill jib		Auxiliary jib	Midfall				Derrick

3 Operating comfort and safety

Upon entering the operator's cab it is apparent that everything has been done to facilitate the handling of the machine for the operator. This can be contributed to the spacious design of the cabin, the adjustable seat, air conditioning, bright interior and exterior illumination as well as numerous other details.

An unobstructed view is an elementary prerequisite for precise and safe operation; therefore, the all-round glazing in the cab ensures excellent visibility of the entire working area. The view upward, which is of special importance, is facilitated through the standard cabin tilting system, which is continuously variable up to 20 degrees.

All operating elements are clearly and ergonomically arranged and all crane movements are precisely controlled by two joysticks and two foot pedals. As an option, double-T-levers are available for the right-hand side, which allow the main boom and the luffing jib to be operated simultaneously.

For Liebherr, safety is of utmost importance. The new safety rail, which allows access along the whole boom on a safety rope without interruption at the boom joints, is mounted on both sides along an antislip catwalk. All crane types are available with railings on the uppercarriage, with catwalks and safety rails for the fall arresting device.

SALE & RENT

Easy and efficient handling

Ease of operation and handling is not only important in the operator's cab but concerns the whole machine. Safe and amply dimensioned ladders and catwalks ease access to all important parts of the crane. An example for rational handling is the practical wire bracket on the hoist rope. It allows easy connection of the hoist rope to the fixed point. Time-saving quick connections, the jack-up system, the fastening system of the mid-point suspension as well as hydraulic activation of the pins with remote control for easy assembly are further important features enabling fast and efficient work.

4 Reliable service

Permanent readiness of the crawler cranes for operation is a major prerequisite for a smooth and efficient application on the jobsite. Periods of standstill are enormously expensive and have to be reduced to a minimum. Liebherr service is always available wherever you need it. A tight network of service stations with qualified contacts and well-trained Liebherr service personnel guarantees quick assistance at any time and any location throughout the world. The numerous locations guarantee the availability of spare parts. A short response time to customer requirements through global presence has always been of utmost importance to Liebherr-Werk Nenzing GmbH and to its numerous subsidiaries. For qualified service of the cranes as well as comprehensive training of operating and maintenance personnel, state-of-the-art repair and training centres are available in the parent company itself as well as at other locations.

LiDAT* keeps you fully informed about your machines - at all times

LiDAT is a custom-made telematics and machine park management system for Liebherr machines and the machines of other manufacturers. Based on state-of-the-art data transmission technology, LiDAT provides information on the location and operation of your machines, enabling their efficient management, optimal operation scheduling and remote supervision.

Information, such as a machine leaving a predefined zone, fuel consumption, service intervals or notifications of specific operating parameters, can also be accessed. Moreover, organisational structures with service partners as well as rentals can be illustrated in the LiDAT web browser. This knowledge about the machine's application form a basis of information and offer new possibilities for rent calculations. In addition, the authorization concept in the LiDAT web browser allows for a differentiated data access.

* available in selected countries

LiDAT* functions

Machine data recording

- Automatic recording of machine data
- Long-distance data transmission via GSM/GPRS, W-LAN or via data carriers

Machine data analysis

- Predefined reports on machine use, warnings and operating parameters
- Generating of reports via the LiDAT web browser and export as PDF, MHTML and in CSV format

Fleet and machine park management

- Operation scheduling irrespective of the manufacturer
- Efficient machine operation scheduling and construction site planning with freely definable work areas and machine groups
- Analysis and logging of machine utilisation efficiency
- Restrictions of use through predefined work areas and working hours
- Data basis for optimised fleet management (e.g. reinvestment decision support)

Service

- Online notification of critical operating conditions
- Storing of important machine data
- Maintenance schedules coordinated with availability of machines
- Automatic service interval reminders
- Efficient service engineer planning due to fast, direct access to each machine

LiDAT features

The various LiDAT functions are included in the basic packages LiDAT Standard and LiDAT Plus. On the basis of LiDAT Plus several additional packages are available.

LiDAT additional package Teleservice

Permanent readiness for operation of Liebherr units is a major prerequisite for a smooth and efficient application on the jobsite. Using the LiDAT additional package Teleservice a Liebherr service engineer can log directly on the machine and rectify possible faults during malfunction. Teleservice allows trouble-shooting without having to travel. Thus, delays and downtime can be avoided and service costs kept to a minimum.

LiDAT additional package Safety Package

Using the LiDAT additional package Safety Package overloads, machine configuration, signals from sensors relevant for the load moment limitation and further extensive information about the life cycle of a machine can be illustrated for Liebherr crawler cranes, both duty cycle and lift version, in the LiDAT web browser. This additional package gives an overview of all safety-relevant information at a glance.

Liebherr crawler cranes through

hout the world

Liebherr crawler cranes are applied on jobsites around the globe. The growing number of application possibilities increases the attractiveness of the products and proves Liebherr's competence in this field. With the LR series, Liebherr offers a well-graduated range of lattice-boom cranes on crawlers for special lifting applications.

In the machine class with lifting capacities up to 300 t the focus lies on low transport weight, rapid self-assembly, optimum lifting capacities in the entire working area as well as comprehensive operating information.

For larger crawler cranes with lifting capacities exceeding 300 t Liebherr also offers a wide variety of multi-functional boom systems. Thanks to innovative solutions, these crawler cranes still provide a high level of mobility even when lifting extreme loads.

Technical description

Engine

Power rating according to ISO 9249, 270 kW (362 hp) at 2000 rpm

Engine type _____ Liebherr D 936 A7 SCR

Fuel tank _____ 800 l capacity with continuous level indicator and reserve warning

Engine complies with NRMM exhaust certification EPA/CARB Tier 4i or 97/68 EC Stage IIIB.

Main winches

Line pull (1st layer) _____ max. 175 kN

Line pull (7th layer) _____ 120 kN

Rope diameter _____ 26 mm

Drum diameter _____ 580 mm

Rope speed _____ 0 – 136 m/min

Rope capacity in 7 layers _____ 489 m

The winches are outstanding in their compact design and easy assembly.

Propulsion is via a planetary gearbox in an oil bath.

Load support by the hydraulic system; additional safety factor provided by a spring loaded, multi-disc holding brake.

The main winches use pressure controlled, variable flow hydraulic motors. This system features sensors that automatically adjust oil flow to provide max. winch speed depending on load.

Option – winch with free-fall system:

Clutch and braking functions on the free-fall system are provided by a compact designed, low wear and maintenance-free multi-disc brake.

Hydraulic system

A double axial displacement pump supplies the open loop hydraulic system, allowing all functions to be operated simultaneously. To minimize peak pressure an automatic working pressure cut-off is integrated in the pump.

All filters are electronically monitored.

The use of synthetic environmentally friendly (biodegradable) oils is possible.

Working pressure _____ max. 350 bar

Oil tank capacity _____ 650 l

Crawlers

Propulsion through axial piston motor, hydraulically released spring loaded multi-disc brake, crawler tracks, hydraulic chain tensioning device.

Track pads _____ 1200 mm

Drive speed _____ 0 – 1.6 km/h

Luffing jib winch

Line pull _____ max. 105 kN

Rope diameter _____ 20 mm

Jib luffing _____ 51 sec. from 15° to 78°

Control

The heart of the hydraulic crawler cranes is the Liebherr control system which has been developed and manufactured in-house.

It includes all control and monitoring functions and is designed to withstand extreme environmental conditions and heavy duty construction tasks. Complete machine operating data as well as warning signals and irregularities are clearly displayed on the high resolution monitor in the operator's cab in the required language.

The electro-hydraulic proportional control allows several movements to be performed simultaneously. This ensures that all categories of loads can be positioned with utmost precision.

Option:

- GSM/GPRS telematics module

Boom winch

Line pull _____ max. 217 kN

Rope diameter _____ 24 mm

Boom up _____ 130 sec. from 15° to 86°

Swing

Consists of rollerbearing with external teeth, swing drive with fixed axial piston hydraulic motor, spring loaded and hydraulically released multi-disc holding brake, planetary gearbox and pinion.

Both swing modes are possible – speed control or free swing.

A multi-disc holding brake acts automatically at zero swing motion. Swing speed from 0 – 3 rpm continuously variable.

Noise emission

Noise emissions correspond with 2000/14/EC directive on noise emission by equipment used outdoors.

Boom combinations

Main boom No. 2320.xx — 86 m

Max. combination — 117 m

Max. combination — 97.0 m

Max. combination — 148 m
